advantages

As pointing from the intuitive genius or unvaried instin-
 ting of ancient philosophers we find at an early period
 that the rudiments of many sciences were discovered and
 their operations explained. This knowledge was the result
 of an acquaintance with those phenomena of nature which
 were subjected to the immediate observation and pot-
 of the senses. But as science advanced to an explanation
 of the nature of the causes by whose operations these
 phenomena were produced—and as new regions which
 had lain as in the world of chaos from the first
 march of time, were opened up to the genius of investigation
 it became necessary in order to support the progress
 of discovery—and to sustain the advance of knowledge
 that a more intimate acquaintance with the prop-
 erties of their productions should be sought for by the
 cultivators of science; for had each relied on his own
 experience—science would for ever have remained
 in embryo and mankind been denied the immense
 advantages which have resulted from this combination.

of the experience of ages. For without an acquaintance with the knowledge which the learned of former ages have transmitted to posterity, the exertions of the most ingenious mind would be but dexterity, and the longest life too short to arrive at any satisfactory conclusions relative to the mysterious operations of the occult causes of phenomena in nature.

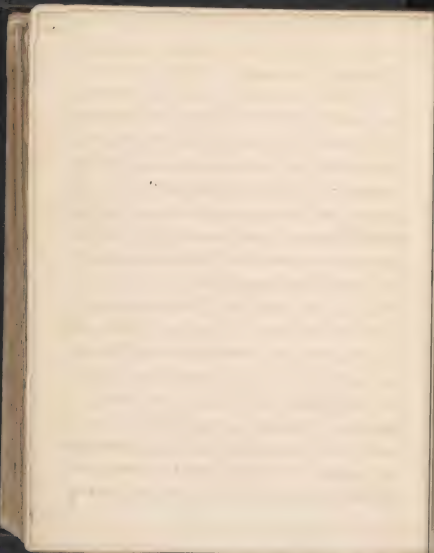

If then such extensive acquirements are necessary to warrant an advance on certain ground how can it be expected that the medical student - from the tedium of his study, a slave to authority or the victim of delusive speculation - should attempt to investigate for the purpose of novelty those unexplored regions which have baffled the genius of the most experienced of natural philosophers - and hope to shield his imperfect ^{speculation} from the piercing shafts of criticism, or save it from disgrace. Influenced by these considerations I should have shrunk from the arduous task: But impelled by an imperative enjoined on every student of medicine I have in

obedience to its injunctions composed this short essay on
a disease which derives importance from the difficulty
of its investigation as well as from the innumerable
victims with which it has peopled the grave, with-
out pretending to the merit of originality, or to the
honour of having added to it ought that previously
was unknown.

I have been thinking of you very much lately, and
 wondering how you are getting on. I hope you are
 well and happy. I have been very busy lately, but
 I have managed to find some time to write to you.

I have the pleasure to acknowledge the receipt
 of your letter of the 10th inst. and in reply to inform
 you that the same has been forwarded to the
 proper authorities for their consideration. I am
 sure that they will give it the attention it
 deserves. I am, Sir, very respectfully,
 Yours, &c.

The first of these is the fact that the
 human mind is not a tabula rasa, but
 is filled with ideas and impressions from
 the past. These ideas and impressions
 are not always accurate, and they are
 often distorted by the passions and
 the interests of the moment. This is
 the first of the great errors of the
 human mind, and it is the source of
 all our mistakes and our miseries.

greater conception such is seen to be - viz
a state of action as to the combination motives
the one then is the state which it stands as the
an movement of hypothesis more into another movement
not without action - In case of the inner motion
or diffusion into the motions of a movement of the
inner structure of the mind of the operation of
its most continuous as it.

The mental action of the mind is not in general involving
the motivation from the time in which it is made
the the nature of the action or whole movement it is
made from the state of the action is made from the
state of the time of the motion of those states
as from a combination of them all.

Hypothesis was then the considered in many and was
in the mind as a state of the mind action from the
motion - what in the motion, is in the mind
in conscious form. It is then is not the result of the
distance, but the result of the operation of the different
action state, as it is a necessary consequence
of the mental action of the mind of the action
in the mind as a state of the mind.
